BHATRIX1

Treatment

- Participants were given loading dose of isoxsuprine-40 mg infusion (i.v) (500 ml of 5% dextrose at a concentration of 0.8mg/ml)
- Drop rate was set at 8 drops/minute (0.04 mg/minute), which was increased by 8 drops every 15-minutes until uterine quiescence
- After 15 minutes of infusion stoppage, isoxsuprine-10 mg/4 hourly (i.m injection) was given up to first 24-hours of hospitalization
- For next 24 hours, isoxsuprine-40mg retard oral capsule was given (BD) as a maintenance therapy and the same oral dose was continued till the time of delivery

Speaking: Pawankumar Singh, Dr Preeti Sharma

Presented in COGI Efficacy and Safety of Isoxsuprine Hydrochloride as Uterine Relaxant in Preterm Labor - A Prospective, Open-Label, Non-Comparative Study- 2018

Stress Urinary Incontinence

Stress urinary incontinence

Dr. Kandy Holland in 1922 introduced the term SUI.

Stress urinary incontinence is defined by the International Continence Society (ICS) as:

"the complaint of involuntary leakage of urine on effort or exertion, or on walking or coughing"

....cont

- We started slow very careful HYDRODISSECTION of grossly intermingled bowel loops to find 4 perforations on ileum from which stools had leaked into the abdomen !!!!! We milked out each and every segment of the bowel so that all stools could be evacuated through these perforation sites .
- Continued our hydrodissection , very slowly and carefully and achieved the anatomy of the bowel . Since around 6 cm of the ileal loop had 4 perforations , we did RA of the loop with 3 perforation , again mobilized adequate loop and on the 4th perforation , we made a fresh surgical incision and got that loop out as a stoma .
- All the adhesions to liver (had to cut a small part of liver serosa to separate the bowel) and spleen were separated , omentectomy was done , pelvic structures were not handled as the tissue was looking to friable and handling it would have caused more harm

CONCERNS WITH SURROGACY

Commissioning couple:

- In hysterectomized women or in those with severe medical condition the ovarian reserve and/or response may be suboptimal
- Concerns about whether the surrogate is taking her medications regularly and her diet is taken care of
- What if the surrogate disappears with the baby in utero or refuses to hand over the baby
- What if the baby born is abnormal
